DBMS LAB CYCLE

CYCLE 1

NO:	EXPERIMENT TITLE
1.	FAMILIRISATION OF DATABASE MANAGEMENT SYSTEMS
2.	DDL COMMANDS
3.	DML COMMANDS
4.	DQL COMMANDS
5.	TCL COMMANDS
6.	DCL COMMANDS
7.	VIEWS AND ASSERTIONS
8.	BUILT IN FUNCTIONS
9.	AGGREGATE FUNCTIONS
10.	ORDER BY, GROUP BY &HAVING CLAUSE
11.	SET OPERATORS, NESTED QUESRIES
12.	JOIN QUERIES

CYCLE 2

13.	PL/SQL
14.	PROCEDUE AND FUNCTIONS
15.	PACKEAGES
16.	TRIGGERS AND CURSORS
17.	CREATING FORMS AND MENUS
18.	MINI PROJECT

Experiment No. 1

FAMILIARISATION OF DATABASE MANAGEMENT SYSTEMS

1. DATABASE
2. DATABASE MANAGEMENT SYSTEMS
3. SQL
4. DDL COMMANDS
5. DML COMMANDS
6. DQL COMMANDS
7. TCL COMMANDS
8. DCL COMMANDS
9. VIEWS AND ASSERTIONS
10. BUILT IN FUNCTIONS
11. AGGREGATE FUNCTIONS
12. ORDER BY, GROUP BY &HAVING CLAUSE
13. SET OPERATORS, NESTED QUESRIES
14. JOIN QUERIES

COMMANDS (definition with syntax)

Experiment No. 2

DDL COMMANDS

1. Create the tables described below:

   Classroom(building,room_number, capacity)

   Department(dept_Name,building,budget)

   Course(course_id,title,dept_name,credits)

   Instructor(ID,name,dept_name,salary)

   Student(ID,name,dept_name,tot_cred)

   Section(course_id,sec_id, semester,year,building,room_number)

   Teaches(ID,course_id,sec_id,semester,year)

   Takes(ID,course_id,sec_id,semester,year,grade)

2. Modify the table
   a. **Course** such that the data type of course_id to varchar(10)
   b. **Department** to add a new column **dept_no** of data type number
   c. **Student** such that the contents of the column **name** should not be NULL
   d. **Classroom** such that the default value for column **capacity** as 50
   e. **Department** such that the contents of column**dept_name** should be unique
   f. **Instructor** such that the values for the column salary should be greater than 50000
3. Remove all constraints and modifications that are given to the database
4. Change the name of table **takes** to **subject**

building	*room_number*	*capacity*
Packard	101	500
Painter	514	10
Taylor	3128	70
Watson	100	30
Watson	120	50

Figure A.3 The *classroom* relation.

dept_name	*building*	*budget*
Biology	Watson	90000

Figure A.10 The *takes* relation.

Experiment no: 3

DML COMMANDS

1. Insert data into given tables
2. Modify the table
    - **Student** such that change the name of student as ‘Mozart’ whose Id is 45678
    - **Department** such that budget of history department is 100000 and building as Taylor
    - **Instructor** such that the salary of each instructor increases by 10%
    - **Course** such that the credits of all courses under computer science department is 4
    - **Student** such that additional 10 points should be given to the total credits of students who have total credits in between 20 to 50
    - **Instructor** such that a salary raise of 5% to be given to instructors whose salary is less than the average salary.
    - **Teaches** such that for the course with course id ‘CS-101’ which is under ‘Fall’ semester , change year of the course to 2010
3. Delete all the student information whose total credits is zero.
4. Delete the record from instructor whose id starts with ‘765’
5. Delete all courses that have never been offered (i.e., which do not occur in the section relation)

Experiment No: 4

DQL COMMANDS

1. Retrieve the names of all instructors along with department names
2. Retrieve the semester names from **teaches** relation and avoid duplicates.
3. Retrieve the name of instructor along with 10% raise in their salary
4. Retrieve the id and name of instructor whose salary is greater than 70000 and working under computer science department
5. Retrieve the names of all instructors along with their department names and department building names
6. Retrieve the instructor names and course identifiers for instructors in the computer science department
7. Retrieve the details of course for which title starts with ‘Intro’
8. Retrieve the details of course in which title contains the substring ‘Comp’
9. Retrieve the information of students who have exactly 3 characters in their names
10. Retrieve the information of Instructors who have at least 3 characters in their names

Experiment No: 5

TCL COMMANDS

1. Change the name of the student with id 44553 as john
2. Commit all the operations
3. Change the name of the student with id 44553 as ‘Peltier’
4. Rollback all the operations
5. Insert a new row into a table student, make 3 updates to the new row and after 2 updates set savepoints.
6. Rollback to each savepoint

Experiment No: 6

DCL COMMANDS

1. Give select permission to all users for a table that you created already
2. Give all permission to all users for a table that you created already
3. Retrieve all the permissions that you are given

Experiment No: 7

VIEWS AND ASSERTIONS

1. Create a view named ‘yearwise’ from table section which shows the details for the courses
on 2009
2. Create a view named ‘studentlist’ from table student which shows the details of students
in alphabetical order

3. Create a view named ‘teacher’ which shows the details of teacher who are not taking any
class
4. Insert a new row into view studentlist and update the name of student as ‘saviour’ to the
new row
5. Delete the new row added to the view studentlist
6. Drop all the views created

Experiment No: 8

BUILT IN FUNCTIONS

1. Evaluate the following using Built in functions
   a. Cos(absolute(-10))* e^2) ,print the rounded value
   b. $Log_{10}(\sqrt{((5\text{^}4)\%14)})$, print the result as 2 digit in decimal part
   c. Sin(30)+tan(60), also print the sign of the resullt

2. Find the greatest preceding or the least succeeding integer of 12.9

3. Display Name of instructor as Uppercase, lowercase letters, and also shows as first letter in capital in separate columns

4. Replace the '-' in Course_id with '/' and display it as new column
5. Display the name of instructor with department name as full name
6. Display the last 3 numbers from course id

Experiment No: 9

AGGREGATE FUNCTIONS

1. Find the sum of the salaries of all instructors, the maximum salary, the minimum salary, and the average salary.

2. Find the sum of the salaries of all instructors of the 'History' department, as well as the maximum salary, the minimum salary, and the average salary in this department.
3. Retrieve the total number of instructors in the institution
4. Retrieve the total number of instructors in the 'Computer science' department
5. Count the number of distinct salary values in the database.

Experiment No: 10

HAVING AND GROUP BY

1. For each department, retrieve the department name, the number of instructors in the department, and their average salary.
2. For each course, retrieve the course_id, the semester, and the number of students who takes that course.
3. For each course on which more than two students taken, retrieve the course_id, the semester, and the number of students who takes that course.
4. For each course, retrieve the course_id, the instructor name, and the number of courses taken from each department
5. For each department that has more than two instructors, retrieve the department name and the number of its instructors who are making more than $80,000.
